

# Integrated Flow Cytometry Resource

Flow cytometry has become a critical tool in the development of therapeutic modalities which impact the immune system. The increase in client demand for flow cytometry services in oncology, immunology, and infectious disease, has spurred Eurofins Clinical Trial Solutions to invest significantly in industry-leading technologies, experienced assay development scientists, and bioinformaticians; to enable us to better support clinical development today and into the future.

We have long provided custom flow cytometry assay development, validation and analysis to fit our customers' needs, but with the creation of our new flow cytometry centers of excellence, we are well positioned to provide custom global solutions, with our integrated team of scientific experts, across a broad range of flow cytometry applications.
